

How to address Java applications portability needs? How to reduce portability delays from weeks to days?

You are Mobile Content provider or publisher, what NEOMAD can do for you?

- ❑ Guaranties **independency** between **source code, languages** and **Java phones**
- ❑ Generates all applications for the different **targeted platforms** and languages
- ❑ **Merges** manufacturers development kits for **simulation** and **testing** purposes
- ❑ Increases productivity by **reducing code complexity** and **optimizing development phases**
- ❑ Provides **application durability** for new mobiles arriving on market
- ❑ Facilitate **maintenance process** with a seamless integration with all SCM tools

The solution for applications portability on European and US Java mobiles and networks

What is NEOMAD?

- ❑ a development **environment**
- ❑ a programming **methodology**
- ❑ a **superset** to MIDP library

for developer wishing to create or port mobile applications, without having to control various existing technologies and the specific platforms behaviors.

How to use NEOMAD?

For a NEOMAD compliant **source code creation**:

- ❑ You **develop natively** in the NEOMAD environment (NEOMAD license)
- ❑ or NEOMADES **ports an existing application** for you (NEOMAD services)

For **runtimes generation**:

- ❑ **You generate runtimes** for your developments or subcontractors one's (NEOMAD license)
- ❑ or NEOMADES **generates runtimes for you** (NEOMAD services)

NEOMADES is also able to execute for you **real tests**.

Who is NEOMADES?

- ❑ a **services company** and a **software vendor**,
- ❑ a technical team specialized on **mobile applications**,
- ❑ providing a **portability** tool kit for mobile phones (**NEOMAD**).

What type of mobile applications?

- ❑ Java MIDP 1.0 & 2.0 – DOJA
- ❑ European and US mobiles & networks,
- ❑ preloaded or downloadable,
- ❑ implementing SMS mechanism,
- ❑ implementing local communication tools,
- ❑ implementing multiplayer functionalities,
- ❑ easy to adapt and expend.
